
Físchlár on a PDA: A Handheld User Interface to a Video Indexing, Browsing and Playback System

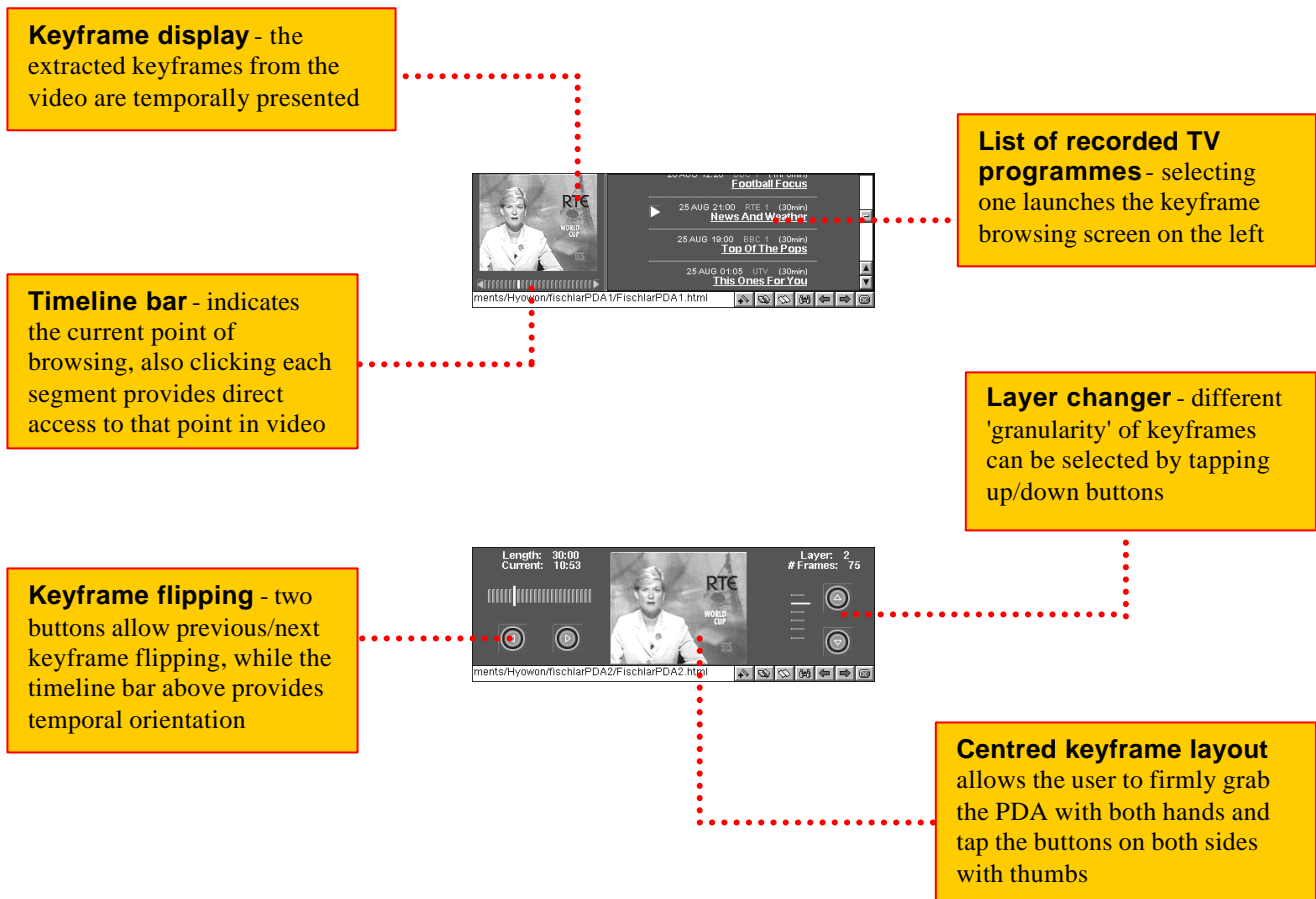

Hyowon Lee, Alan F. Smeaton, Peter McCann,
Noel Murphy, Noel E. O'Connor and Seán Marlow

FÍSCHLÁR is a web-based digital video system that allows keyframe browsing of video content on a desktop PC. Currently 8 distinctive browsing interfaces have been designed, all running at the same time as browsing options.

Browsing interfaces have been designed by a design method we have developed, allowing us to come up with many different design possibilities that suit for the particular environment of a target machine and a target user and task.

Of all possible designs, some of these interfaces have been designed for Psion's Revo, a PDA (Personal Digital Assistant) whose screen has 16 shades of gray, 480x160 pixel resolution and is touch-sensitive. Two examples are:
